Comeo Porte is not just a door manufacturer, it is a true representative of national culture. All our products are made in Ukraine in accordance with the highest quality standards. We closely monitor every stage of production to fully meet the requirements of our customers. Comeo Porte doors are manufactured taking on board modern trends and market needs, which ensures their reliability, durability and attractive design.

Factory **Comeo Porte** has a 20-year history. Since its inception, we have specialised in the manufacture of profile and panel doors.

In 2004, we started our own production of doors and sliding systems branded **Comeo Porte**. In line with market trends, we started using veneer and paint.

Ecological safety of our products is a priority for us. All materials, including low-formaldehyde timber and MDF panels, are sourced from eco-friendly sources, using safe water-based adhesives.

Over the years, the company has achieved great success in its own production. Our innovative solutions, such as telescopic mouldings, hidden hinges, aluminium frames, magnetic locks and others, provide Comeo Porte doors with technological excellence and reliability, as well as perfect sound insulation and modern design.

Comeo Porte is the essence of high quality in exclusive products.

The use of environmentally friendly veneers in our production not only preserves natural resources but also ensures health safety. We consider forests to be the 'lungs of our planet', which is essential for future generations. **Comeo Porte** strives to create products that exist in harmony with the environment.

We offer a wide range of products:

- interior doors made of various materials, including wood, glass and aluminium;
- sliding door systems and partitions that expand the functionality of the premises;
- wall panels that add style and practicality to the interior;
- integrated into interiors to ensure efficient use of space.

Comeo Porte's production and logistics complex, located on an area of over 40,000 m² in Ukraine, provides high production efficiency and prompt delivery of our products.

Comeo Porte follows the latest trends in door design, using a wide range of materials and matte surface finishes. The expressive geometric shapes and finishes of the door leafs underline the originality of design solutions. The colour range of RAL/NCS palette allows you to turn any idea into reality.

Series ACADEMIA

One of the key benefits of Secret Select is its readiness to meet clients halfway. In some projects, custom models designed by designers emerge. Comeo Porte has extensive experience in delivering bespoke solutions, with many models receiving high praise from our clients. A number of exclusive models have proven popular, leading to repeat orders. This experience has built a foundation of knowledge that paved the way for creating the Academia collection.

The classic Flexo models of the Secret Select range are designed for classic, baroque or provence design. The absence of a pronounced surface structure and the application of delicate painting on the door leaf facade underline the aristocratic and elegant design, while deep figured milling, capitals and carved architraves enhance the fashionable interior.

The undoubted advantage of the Flexo models of the Secret Select range is their versatility and ability to become the most striking part of the interior, emphasising it in a favourable way. The floral ornament of the door leaf looks harmonious on a matte and glossy surface, which can accept the colours of the entire RAL palette.

The Trendy Dell'onda model in the Secret Select line introduces Mediterranean themes to interior design. Wavy lines and soft pastel tones on the door panel evoke a mood of carefree romance, blue coastlines, and summer seas.

The subtle design, smooth, symmetrical curved milling, and use of classic door frames add a youthful and cheerful touch to modern interiors.

The ability to paint the frame, casing, and door panel in the entire RAL palette allows Trendy Dell'onda models to harmonize in any interior color scheme.

Series TRENDY FLOREALE

The Trendy series (from "trend" or "fashion") combines three design groups inspired by floral, geometric, and botanical motifs.

Natural and botanical motifs in Trendy Floreale enhance ethnic or Provence-style interiors. The romantic simplicity of this series harmoniously accentuates key elements of the "French country" style, adding essential highlights to the decor.

Floreale 1

Floreale 6

The straight, parallel lines of the Trendy Geometrica series resemble a picture of fields and meadows lined with a network of roads when viewed from a great height or a complex engineering scheme on a designer's desktop.

The restrained geometric shapes of the series fit into any modern interior, emphasising its severity and technological effectiveness. The grunge or techno, brutal or minimalist styles will be organically complemented by the doors of this expressive series.

The Trendy Graffiata series, part of the Secret Select range, develops the technological design of Scacco models. Massive geometric shapes, alternating volumetric milled surfaces reminiscent of a chessboard, a pronounced 3D effect and a matte finish create a sense of rigour and modernity.

The alternation of vertical and horizontal milling visually accentuates the look on the illuminated surfaces of the door leaf. In general, for Trendy Graffiata models, the play of light and shadow looks advantageous with the use of zonal lighting.

As with the Scacco models, changing the horizontal and vertical dimensions can change the proportions in the design. The frame, mouldings and door leaf of the Trendy Graffiata range are painted in the entire RAL panel.

Series TRENDY LINEA

The Trendy Linea series of the Secret Select range is characterised by a simple, unforgettable design. The combination of longitudinal and transverse pronounced milled lines creates an original pattern on the canvas. The 3D effect is achieved by changing the depth of the lines, and the matte finish adds to the modernity of the design.

Among the features of Trendy Linea models, we note the possibility of decorating the door leaf with satin aluminium moulding.

The aluminium frame and the possibility of painting the doors of this model range in standard and RAL colours provide for a wide range of interior decoration options in modern or techno design.

Series TRENDY LINEA WITH MOULDINGS

The TRENDY series with mouldings is a modern solution for interiors that combines stylish design and functionality. These doors have a minimalist appearance with elegant decorative elements in the form of mouldings, which give the doors a sophisticated and fashionable look. The frame, mouldings and door leaf of the Trendy range are painted in the entire RAL/NCS panel. The mouldings are available in three colours: aluminium, gold and black.

The intricate ligature of floral ornaments of the Trendy Ornamento series and the rhythmic combination of repeating geometric shapes will appeal to fans of the original design, where each element is in its place, having its own deeply symbolic meaning.

The ribbon ornament, consisting of leaves and flowers, divides the surface of the door leaf into two unequal planes, filling the overall interior design with national colour. The combination of simple and complex repeating shapes creates the architectonics of the image of this series, forming its holistic and complete appearance. Like the models of other series, Trendy Ornamento can be painted in the entire RAL palette.

Series TEKNA

Tekna swing doors are one of the most technologically advanced series. They are made on the basis of a honeycomb-filled canvas, which is framed by an aluminium profile vertically or around the entire perimeter.

A special feature of the series is the possibility for the customer to choose the door finishing material. The doors can be made with a laminate surface finish, or in a more technologically advanced version, which involves the use of glass in the perimeter of the door leaf and an aluminium profile.

Compared to conventional glass doors, doors with glass trim have a significant advantage of increased sound insulation due to the honeycomb filling of the leaf with the use of seals along the contour.

Shielded, smooth with milling and glass

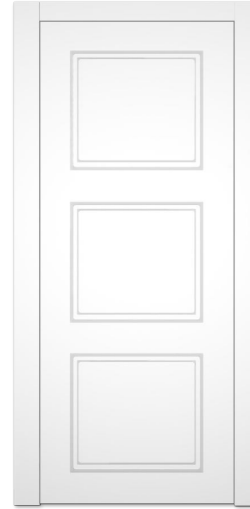

The Secret Light door unit is an excellent choice for modern interiors. It creates a coherent design due to the coplanarity (location in the same plane) of the door leaf and telescopic trim, which adds aesthetics to the room. The use of environmentally friendly materials is also an important aspect that ensures safety and comfort in your home. This is a great example of a modern approach to creating interior solutions where aesthetics and environmental friendliness go hand in hand.

Series Multistrato

Leaf  Without a quarter

The Architec Line flush-mounted door is a modern solution that allows you to create a seamless transition between the wall and the door leaf. The design characteristics allow the door to be installed flush with the wall, creating a perfectly flat surface. The absence of platbands significantly reduces the weight of the structure and guarantees an aesthetic appearance. Such doors are especially popular in modern interiors, where clean lines and the absence of unnecessary details are important. Flush-mounted doors mean the absence of unnecessary decorative elements, the possibility of using paint, plaster or wallpaper of your choice.

Multistrato hidden doors have a honeycomb leaf lined with high-density laminated CDF tiles, which opens up the possibility of further decoration with any finishing material.

Leaf  with a quarter

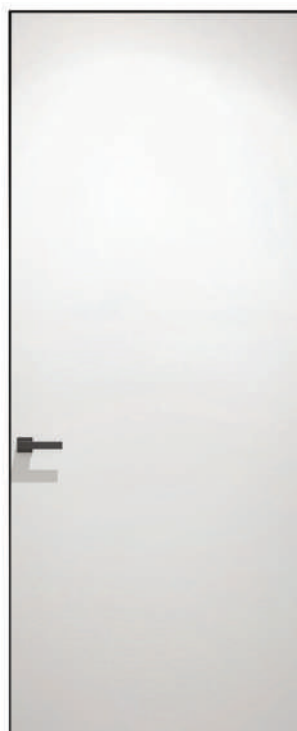

Flush-mounted doors with quarter leaf are the perfect combination of advanced technology and modern design. These doors not only provide exceptional aesthetic appeal, but also significantly increase functionality, creating a complete and harmonious interior. The quarter leaf improves sound insulation, which guarantees a high level of comfort and privacy in the room. The door blocks can be made with both external and internal opening, which makes them versatile in use. Grezza flush-mounted doors with quarter leaf are the best choice for those who appreciate not only style but also a high level of comfort.

FLUSH-MOUNTED BASEBOARD

The flush-mounted baseboard *Comeo Porte* is made of anodised aluminium and is mounted flush with the wall, making it the perfect design solution. The flush-mounted baseboard is a perfect match for flush-mounted doors or ordinary doors with mouldings. This baseboard allows you to achieve the perfect angle between the wall and the floor finish.

The decorative part of the baseboard can be made in a variety of colours, for example, to match the door veneer. Such a baseboard does not collect dust and simplifies the arrangement of furniture. The height of the skirting board can be varied by lifting the profile up from the floor.
